

Utilitrak[®] linear guides

Engrenages **HPC** has completed its linear guide range by adding the Utilitrak[®] linear guides and carriages to the April 2011 edition of its catalogue

Easy to install and not requiring regular maintenance, they are particularly suitable for applications that don't require high load carrying capacity, high rigidity or accuracy such as machine tool applications.

They are an economical alternative to recirculating ball type guidance systems

Key features are:

- Reduced noise (smooth movement, no friction)
- High speed
- Resistant to contamination by dust

Find out more about them on www.hpceurope.com
